

Digital Menu – Client Playbook

A guide for restaurant staff on how the dashboard works, how guests use the QR menu, and how to customize the mobile experience with the Layout Editor.

What this system does

Your outlet gets a **mobile digital menu** that guests open by scanning a QR code. You manage everything from the **Dashboard**:

- **Menu** – categories, dishes, prices, photos, badges (New, Popular, Jain, etc.)
- **Appearance** – logo, tagline, colors, background photo, tag chip styles
- **Layout Editor** – arrange what guests see on each screen (Welcome, Checked In, Menu, Item Detail)
- **QR code** – download and print for tables, entrance, receipts
- **Customers** – guest list and visit tracking from check-in

Each **outlet** (location) has its own menu, QR link, and layout. Use the outlet switcher in the left sidebar to change which location you are editing.

How guests use the QR menu

Typical flow when someone scans your QR:

...

Scan QR → Welcome (optional check-in) → Checked In → Menu → Item Detail

...

Step	What the guest sees
----- -----	
1. Scan QR	Opens your menu in the phone browser
2. Welcome	Restaurant name, logo, optional name/phone form, Continue button
3. Checked In	Confirmation, loyalty progress, "View Menu"
4. Menu	Magazine-style pages with categories and dishes
5. Item Detail	Full dish view – photo, description, price, tags

Guests can also go **straight to the menu** depending on how your entry URL is shared. The screens above are what you customize in the Layout Editor.

Important: Changes to menu content (dishes/prices) show up as soon as you save in **Menu**. Changes to look & layout require saving in **Layout Editor** or **Settings → Appearance**.

Dashboard overview

After login, the sidebar includes:

Section	Purpose
-----	-----
Dashboard	Summary stats for the selected outlet
Customers	Guest list, visit history, tags, notes
Import Customers	Bulk upload customer records
Menu	Add/edit categories, items, images, prices, badges
Layout Editor	Visual editor for all QR screens
QR & Entry Flow	Your QR code, scan URL, download PNG
Analytics	Charts and trends
Settings	Outlet info and Appearance

Use the **outlet name** at the top of the sidebar to switch locations if you manage more than one.

Menu management

Path: Dashboard → **Menu**

Categories

- Create categories (e.g. Starters, Mains, Desserts)
- Collapse/expand categories in the list
- Delete empty categories when needed

Items

For each dish you can set:

- **Name** and **description**
- **Price**
- **Category**

- **Photo** (upload or bulk upload with manifest)
- **Image scale** – zoom/crop how the photo appears on the menu (50-200%)
- **Tags** – Bestseller, Chef's Pick, Popular, New
- **Featured** / **New** / **Jain** toggles

Tips for dish photos

- **Remove the background first.** Dish images look much cleaner on the menu when the plate/food sits on a transparent (or plain) background. Use any free online background remover (search “remove image background”), download the result as PNG, then upload that file in **Menu**.
- Good lighting and a clear crop make the magazine layout look best
- Use **New** and **Featured** sparingly so badges stay meaningful
- After editing, open **QR & Entry Flow → Open live menu** to preview on your phone

Branding & appearance (outlet-wide)

These settings apply to **every QR page** for the selected outlet.

Path (either):

- Dashboard → **Settings** → **Appearance**
- Dashboard → **Layout Editor** → **Outlet appearance** (left panel)

Click **Save outlet appearance** when done.

Behind the page (global background)

This is the **photo or color behind all pages** – like wallpaper behind the menu.

Type	Use when
Solid color	Simple branded backdrop
Gradient	Soft color blend
Background image	Restaurant photo, texture, brand image

For images you can adjust:

- Size (cover / contain), position, repeat
- Image opacity, blur, brightness
- Optional **overlay color** + opacity (darken/lighten the photo)

Restaurant logo

- Upload **one logo per outlet**
- Used anywhere you place a **Restaurant Logo** block in the Layout Editor

- Same logo on Welcome, Checked In, etc.

Tagline

- Short line under the restaurant name (e.g. "Wood-fired goodness, served with love.")
- ****Edit here**** in Appearance
- ****Show or hide per page**** in Layout Editor → Restaurant Name → "Show tagline"

Leave tagline blank if you do not want one anywhere.

Font colors

- ****Text**** - main body text
- ****Secondary**** - muted/helper text
- ****Primary / accent**** - buttons, highlights
- ****Page title on bg**** - large faded category words on menu pages (e.g. "Desserts")

Tag styles

Customize chip colors and emoji for:

New, Featured, Popular, Bestseller, Chef's pick, Jain.

Clear emoji field for text-only chips.

Layout Editor - full guide

****Path:**** Dashboard → ****Layout Editor****

The editor shows a ****phone preview**** in the center. What you see there is what guests get on that page (after you ****Save****).

The four pages

Page	What it controls
----- -----	
Welcome	First screen after scan - logo, name, check-in form, Continue
Checked In	After successful check-in - loyalty, View Menu
Menu	Full menu book experience
Item Detail	Single dish screen (can customize per dish)

Each page saves ****separately****. A dot on the page tab means unsaved changes.

Editor layout (desktop)

...

Pages	Phone preview	Inspector
Layers		(settings
Components		for sel.)

...

Editor layout (mobile)

- **Page chips** at the top switch Welcome / Checked In / Menu / Item Detail
- **Layers** and **Inspector** open as slide-over panels
- **Save** bar at the bottom when you have unsaved changes

Key actions

Button	What it does
----- -----	-----
Save	Publishes the current page to live QR
Save [Page name]	(in sidebar) Saves that specific page only
Discard	Reverts current page to last saved version
Reset	Restores factory default layout for that page

Always **Save** after moving blocks or changing colors. Unsaved work is lost if you leave the page or discard.

Backgrounds: two layers (important)

QR screens use **two stacked layers**. Think of it like a desk:

...

Page background (solid / gradient / none)	← surface where items live
Outlet appearance (Settings / Outlet appearance)	← photo/color behind the page

...

```

### Outlet appearance ("behind the page")
- Set in Settings → Appearance or Layout Editor → Outlet appearance
- Usually your restaurant photo or brand color
- Same on all pages unless the page surface covers it

### Page background ("where items live")
- Set by selecting Page background in the layers list (or the Page root)
- Options:
  - None — see outlet behind — transparent; outlet photo shows through
  - Solid — flat color with adjustable opacity
  - Gradient — two colors with adjustable opacity

Example: Outlet photo behind + semi-transparent white page fill = readable menu on top of your
  ambiance photo.

---

## Working with components

### Adding components
1. Open the correct page (Welcome, Menu, etc.)
2. In the left panel, Add component
3. Click the block type you want
4. Drag to position on the phone preview
5. Select it and edit in the Inspector
6. Save the page

### Common components

| Component | Typical use |
|-----|-----|
| Restaurant Logo | Brand mark (uses outlet logo from Appearance) |
| Restaurant Name | Title + optional tagline |
| Text | Headings, instructions, muted copy |
| Check-In Form | Name + phone on Welcome |
| CTA Button | Continue, View Menu, etc. |
| Loyalty Summary | Visit progress on Checked In |
| Menu Book | Full menu (Menu page — usually one block) |
| Item Detail Shell | Full item view (Item Detail page) |
| Banner / Divider | Visual separation |

### Moving & resizing

```

```
- Click a block on the preview to select it
- Drag to move (unlocked blocks)
- Corner handles to resize
- Menu Book and Item Detail Shell use a top "Drag block" bar — dish labels inside can be
  edited separately

### Layers panel
- Lists all blocks on the page top-to-bottom
- Click to select
- Outlet appearance — global branding (not a layer on canvas)
- Page background — page surface settings
- Paste — paste a copied component from another page

### Restaurant Name settings
- Display text — override name (leave blank to use outlet name)
- Show tagline — on/off for this page only
- Tagline text is edited in Settings → Appearance, not here

### Restaurant Logo settings
- Logo image comes from Outlet appearance
- Here you set size, align, fit, corner radius for this placement

---

## Item Detail — per-dish customization

On the Item Detail page:
1. Use the Editing item dropdown to pick a dish
2. Adjust layout for that item (label positions, styles)
3. Save Item Detail — saves layout for that dish

Other dishes keep their own overrides. Use this when one hero dish needs a different label layout.

---

## Menu page — dish labels

The Menu Book block controls the magazine layout. In the editor you can:
- Select item name, price, tags, or tap hint labels
- Change font, color, size, position per label
- Drag dish slots on the page (editor mode)
```

Category **filter** in the editor header helps preview one category at a time.

QR & Entry Flow

Path: Dashboard → **QR & Entry Flow**

- **Scan URL** – link encoded in the QR (share this for testing)
- **Download PNG** – print-ready QR image
- **Open live menu** – preview exactly what guests see

Place QR codes at tables, entrance, or on receipts. After changing menu or layout, scan again to verify.

Settings (other tabs)

Outlets

View outlet name and location. Multi-outlet accounts switch via the sidebar.

Customers & analytics

Customers

- Search and filter guest list
- See visit count, tags (e.g. First Timer), phone
- Add notes from visits / check-ins

Analytics

- Customer growth and outlet trends

Recommended workflows

Launch a new outlet

1. **Settings → Outlets** – confirm outlet details
2. **Menu** – add categories, items, photos (remove backgrounds on dish images first)
3. **Settings → Appearance** – logo, tagline, background, colors

```

4. Layout Editor – tweak Welcome / Menu if needed, Save each page
5. QR & Entry Flow – download QR, test scan on your phone

### Refresh seasonal menu
1. Prep new photos with background removed, then update items in Menu
2. Mark new dishes with New tag
3. Optional: adjust Appearance tag colors
4. Preview via Open live menu

### New brand photo behind the menu
1. Settings → Appearance → upload Background image
2. Set each page Page background to None or a light semi-transparent solid
3. Save outlet appearance + Save each layout page

### Hide tagline on Welcome only
1. Settings → Appearance – set tagline text
2. Layout Editor → Welcome – select Restaurant Name
3. Uncheck Show tagline
4. Save Welcome

---

## Troubleshooting

| Problem | What to check |
|-----|-----|
| QR menu looks old | Hard-refresh browser; confirm you Saved layout/appearance |
| Logo missing | Upload in Appearance, add Restaurant Logo block, Save page |
| Background photo not visible | Page background may be opaque – set to None or lower opacity |
| Check-in button does nothing | Welcome page needs CTA Button with action submit check_in |
| Menu empty | Add items in Menu; confirm correct outlet selected |
| Layout broken on phone | Use Reset for that page, then rebuild; or Discard unsaved changes |
| Tagline wrong place | Edit text in Appearance; show/hide per page on Restaurant Name |

---

## Quick reference – where to change what

| I want to change... | Go to... |

```

```
|-----|-----|
| Dish name, price, photo | **Menu** |
| QR code file | **QR & Entry Flow** |
| Logo (all pages) | **Settings → Appearance** |
| Tagline text | **Settings → Appearance** |
| Show/hide tagline on one page | **Layout Editor → Restaurant Name** |
| Background photo (behind everything) | **Settings → Appearance** |
| Page color overlay | **Layout Editor → Page background** |
| Welcome / check-in layout | **Layout Editor → Welcome** |
| Menu page layout | **Layout Editor → Menu** |
| Single dish detail layout | **Layout Editor → Item Detail** |
| Tag badge colors | **Settings → Appearance → Tag styles** |
```

Billing & monthly charges

Your monthly fee keeps the digital menu live. It covers:

- ****Maintenance**** of the web app
- ****Bug fixes**** and ongoing improvements
- ****Support**** when you need help
- ****Server / hosting charges**** (the infrastructure your menu runs on)

Payment due date

Payment is due ****before the 10th of every month****. An ****invoice will be shared**** each cycle – please settle it on time.

What happens if payment is late

The menu, dashboard, and QR links all run on paid servers. Those server costs must be paid on the same schedule. If the monthly fee is not received in time, ****the web app will go down**** (including the guest QR menu) until the outstanding amount is paid. This is automatic once server billing lapses – everything is connected, so unpaid hosting takes the site offline.

Please treat the 10th as a hard deadline so guests can keep scanning and ordering without interruption.

Need help?

- Test always on a ****real phone**** after saving – the Layout Editor preview matches live QR.

- Save **Appearance** and each **Layout page** separately; they do not auto-save together.
- When in doubt: **Discard** experimental changes, or **Reset** a page to defaults and start again.

For technical issues, support, or billing/invoices, contact your platform administrator.
